## Replacement Kit P/N 92776C

### ITEMIZED PARTS LIST

ITEMNO.	PARTNO.	DESCRIPTION
1	40116C	Nut - Cover
2	40060C	Button
3	15005C	Nut-Retaining
4	61314C	Regulator
5	40045C	Nut - Hex
6	51576C	Bracket - Valve and Push Bar
7	401475143730	Clip - Speed Strip
8	70817C	Elbow - 1/4" to 1/4"
9	70745C	Union - 3/8" to 1/4"
10	55996C	Strainer
11	50986C	Holder - Regulator
12	70002C	Screw - #10 x .50 HHSM
13	23004C	Bracket - Regulator Mtg.
NS	51544C	Bubbler
NS	100322740560	Gasket - Black
NS	111516043890	Pin - Cotter 1/8" x 3"

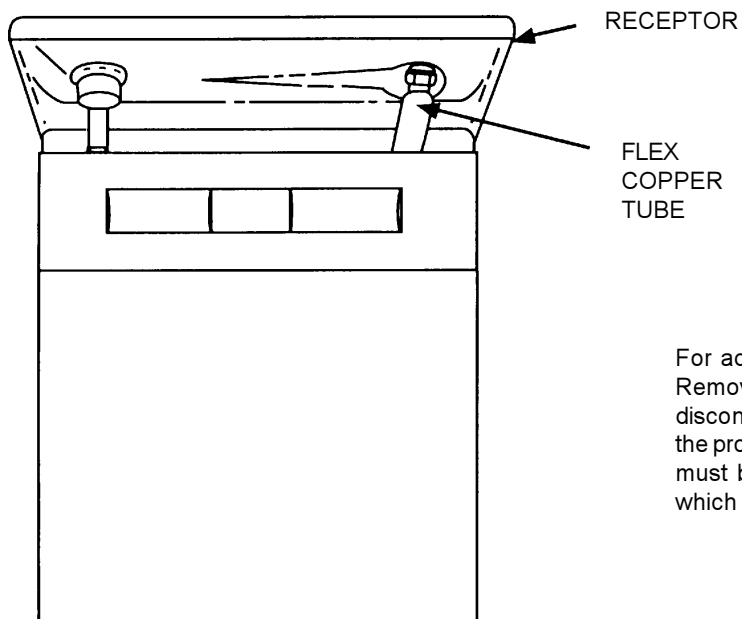

## Removal of Existing Valve

Remove two (2) bumper screws and two (2) screws mounting front panel at bottom using a 5/16" and 1/4" socket or nut driver or a regular slotted screwdriver. Loosen the (2) screws holding the front panel at the top. Remove the front panel and set aside

Loosen (2) screws on upper front panel using a 5/16" socket or nut driver. Remove upper front panel. Unplug the water cooler from electrical outlet. Shut off water supply.

For additional access to water valve connections. Remove the eight (8) receptor mounting screws, disconnect the waste line from P-trap and unscrew the projector. Lift the receptor. **NOTE:** Extreme care must be taken not to kink the flexible copper line which supplies the projector.

w/basin removed

Remove (5) screws holding the black plastic regulator bracket using a 5/16" socket or nut driver.

Disconnect water inlet and outlet lines from existing water valve.

Remove regulator with bracket from the water cooler. Remove cotter pins from bracket and remove front push bar.

If the water lines on the unit were connected to the valve with black compression fittings:

- Remove and discard the "o"-ring and black plastic spacer
- DO NOT ATTEMPT** to remove the grab ring and connection nut. Attempting to remove the grab ring can damage, nick or scratch, the sealing area on the tube end.

If the water lines on the unit were connected to the valve with brass flare fittings:

- Cut the tubing as close to the flare as possible with a tube cutter. **NOTE:** Only use a tube cutter to cut the tubing so the end is square. Other tools, for example a hacksaw, could leave an excessive burr.
- Discard the cutoff end and flare nut.
- De-burr the tube ends before assembling to the new valve assembly.

### Installation Of New Valve Assembly

Top view of cooler  
w/basin removed

Connect water inlet line, from building supply to strainer on replacement valve assembly.

Connect chiller line to super speed fitting.

### OPERATION OF QUICK CONNECT FITTINGS

1. Push tubing into fitting until it reaches positive stop (approximately 3/4 inches). **DO NOT SOLDER TUBES INSERTED INTO THE STRAINER AS DAMAGE TO THE O-RINGS MAY RESULT.**
2. To remove tubing from fitting, relieve water pressure, push in on gray collar while pulling out on tubing.

Turn on water supply and check for leaks. Install new projector and reposition receptor and drain tube to "P"-trap. Adjust water flow. Flow is adjusted by removing cover and button on valve bracket, a clockwise adjustment to screwdriver slot increases the stream height. Reassemble cover and button. **NOTE:** Flow must be adjusted before push bar is installed. Install push bar on to new valve bracket. Add speed clip strip to valve bracket assembly, (row of 4 - (1) each side). Install valve bracket into unit. Reattach receptor and reconnect water tube to "P"-trap. Connect power cord to electrical outlet. Reassemble panels and kickplate to unit.
